

Assignment: Create a Student Registration Form in Angular

Objective:

To create and validate a **student registration form** using **Angular Forms (Template-driven or Reactive)**.

Requirements:

1. Form Fields:

- Full Name (text)
- Email (email)
- Phone Number (number)
- Gender (radio buttons: Male/Female/Other)
- Course (dropdown: Angular, React, Java, Python)
- Address (textarea)

2. Validation Rules:

- Full Name → Required, minimum 3 characters
- Email → Required, must be a valid email format
- Phone Number → Required, 10 digits
- Gender → Required
- Course → Required
- Address → Optional

3. Form Buttons:

- **Submit** → When clicked, display form data below the form (only if valid)

- **Reset** → Clears all form fields

Output:

When the user submits, show a message like:

Registration Successful!

Name: John Doe

Email: john@example.com

Phone: 9876543210

Gender: Male

Course: Angular

Address: Chennai
